<i>Individual 90 minute session</i>	<i>\$100</i>	<i>\$110</i>
<i>Prenatal massage 90 minutes</i>	<i>\$100</i>	<i>\$110</i>

Gift Certificates are available for any occasion

WHAT IS THE FIRST APPOINTMENT LIKE?

Your massage therapist will begin by asking you general health questions. Massage may not be appropriate in certain situations such as fever; certain cardiovascular conditions; contagious or infectious diseases, including any cold or flu; under the influence of drugs or alcohol, including prescription pain medication; recent operations or acute injuries; neuritis; or skin diseases and the first trimester of pregnancy. The primary massage technique will determine your attire. For a full-body Swedish massage most people undress completely, though you may choose to wear whatever makes you feel comfortable. Your massage therapist will give you privacy to undress. During the massage, your body is covered except for the area being worked on. For a sports massage, it is best to wear athletic shorts and/or a sports bra to facilitate stretching techniques. For chair massage clients remain fully clothed.

WHAT SHOULD I DO DURING MY MASSAGE?

Your therapist will adjust your position as needed, otherwise make yourself comfortable and try to relax. Many people close their eyes and relax completely during a session; though others prefer to talk. It's your massage, so do whatever feels natural to you. Do not hesitate to ask questions at any time.

HOW WILL MY MASSAGE FEEL?

The most effective and deepest massage works with the body's natural responses, not against them. Working in the area of an injury or chronic pain may initially cause some discomfort, which usually lessens in the first few minutes. Your massage therapist knows ways to minimize pain, and will work carefully within what feels right to you. Always tell your therapist if you feel any discomfort so he or she can adjust.

HOW WILL I FEEL AFTER MY SESSION?

Most people feel very relaxed. Some experience freedom from long-term aches and pains developed from tension or repetitive activity. After an initial period of feeling slowed down, people often experience increased energy, heightened awareness, and greater productivity, which can last for days. Since toxins are released from your soft tissues during a massage, it is recommended you drink plenty of water afterward.

DESCRIPTION OF SERVICES

SWEDISH MASSAGE: Swedish massage utilizes long, flowing strokes, generally directed toward the heart. The goal of Swedish massage is to promote deep relaxation, release of stress, increased circulation and blood flow.

DEEP TISSUE MASSAGE: Deep tissue massage is a type of massage therapy that focuses on realigning deeper layers of muscles and connective tissue. It is especially helpful for chronically tense and contracted areas such as stiff necks, low back tightness, and sore shoulders. Some of the same strokes are used as Swedish massage, but the movement is slower and the pressure is deeper and concentrated on areas of tension and pain.

SPORTS MASSAGE: Sports massage is a more anatomically specific form of massage that supports fitness and helps reduce the demands that the sport places on the body, shortening recovery time. The therapist may utilize many of the strokes used in Swedish massage, along with myofascial release, trigger point therapy and active-assisted techniques, such as active-assisted broadening and lengthening and proprioceptive neuromuscular facilitation (PNF) stretching.

HOT STONE MASSAGE: Hot stone massage is a massage where the therapist uses smooth, heated stones, either as an extension of their own hands, or by placing them on the body while they massage other parts of the body. The heat can be both deeply relaxing and help warm up tight muscles so the therapist can work more deeply, more quickly.

PRENATAL MASSAGE: Prenatal massage is tailored specifically to the needs of pregnant women. The client is usually positioned on special cushions or on their side with pillows, wedges, or a full-length body pillow for support. It is generally best to wait until after the first trimester of pregnancy to receive prenatal massage. All prenatal massages are 90 minutes.

REFLEXOLOGY: Reflexology is the study, science, and art of using specific touch techniques on reflex maps, resembling a shape of the human body, that are believed to exist on the feet, hands and outer ears. The theory is that by using proper reflexing techniques, irritating chemicals around the nerve endings are broken down, soothing and relaxing nerves, in turn soothing and relaxing the entire body, regions or specific parts of the body.
